

## Innova Laundry Handling Systems Aftercare

Innova Systems are designed for many years of trouble-free operation, but any high-volume mechanical system will be subject to significant wear and tear.

That's why we offer our Aftercare plan, which provides you with both a service plan and extended warranty on your new system. The plan provides proactive maintenance via a yearly service which is parts and labour inclusive and warrants the system against defects and breakdowns. Aftercare is available on an easy monthly subscription plan and is designed to minimise downtime and maximise productivity.

In addition, we offer a service plan for any existing monorail system provided by us or a third-party manufacturer, designed to keep your laundry moving.

Contact us to find out more and discuss your requirements

Whatever your laundry handling requirements, we deliver handling, storage and conveying systems that offer a complete solution.

## Innovative laundry handling solutions

With over thirty years' experience in providing laundry handling systems, our skills and expertise makes us the laundry automation partner you can trust.

## Keep your laundry moving

At Innova Systems we design, manufacture, install and maintain bespoke laundry handling systems for a range of applications including high level, low level and floor level handling requirements.

All our systems are thoughtfully designed to optimise your laundry throughput, improving operational efficiencies and increasing productivity at every stage of the journey: from soiled linen sorting, monorail storage and delivery to clean linen handling, press-to-dryer delivery and finished linen conveyor systems.

All systems can be fully automated with computer control systems that are tailored to your requirements, and can monitor, control and report on all the operations within your laundry.

**We have over thirty years' experience of designing and developing innovative laundry handling solutions developed specifically for each customer to meet their requirements and solve their laundry handling challenges.**

# Our laundry handling **solutions**

**Whatever your laundry handling requirements, we deliver handling, storage and conveying systems that offer a complete solution.**

## Laundry sorting

Our laundry sorting solutions fit into any workspace and significantly reduce your labour requirements, automating the sorting process and improving washing performance and post wash handling.

High-level, high-volume honeycomb sorting provides the automatic transfer of full loads. Also available with optional double bin stations for continuous sorting and with or without electronic weighing.

For lower-level sorting applications, we offer roll-cage sorting, with optional electronic counting, semi-automatic bag handling with electronic weighing and fully automatic sliding weigh station bag handling with electronic weighing.

InnSort is our latest floor-level automatic transfer sorting solution bringing added efficiencies to lower volume laundries, which were previously only available in high-volume environments.

## Monorail storage and delivery systems

Our monorail systems save floor space and transport linen around the laundry more efficiently than manual handling. All our systems are based on our unique extruded aluminium rail, which is anodised to increase resistance to wear and so reduce down-time and maintenance cycles. Computer control systems provide optimal management and improved reliability and ease of operation.

- 01. Primary monorail systems**  
Provide dynamic high-level storage and delivery of soiled linen, allowing processing in the optimal sequence, maximising efficiency.
- 02. Classified monorail systems**  
Provide storage and delivery of soiled linen to washing machines and can service multi-station honeycomb sorting systems with automatic bag loading.
- 03. Cleanwork monorail**  
Provides efficient storage and handling of cleaned linen to laundry finishing equipment such as presses and dryers, keeping linen clear of the laundry floor and requiring no manual handling.

## Belt conveyors

We design belt conveyors that can handle the simplest to the most complex requirements, for every stage of the laundry process. Belt conveyors can be flat, inclined or a combination to any length, incorporating retracting conveyors and bends, and can be integrated with any other systems.

## Installation tailored to your unique requirements

Our design team will survey your premises and develop a fully bespoke system that both delivers on laundry handling specifications and fits into your unique workspace. Our specialist installation teams have the knowledge and experience that allows us to integrate monorail and belt conveyors into any environment, providing the most effective handling solution for your laundry operations. And once installed, our onboarding team will take you through all aspects of your new laundry handling system ensuring that your people are trained and confident in use, ensuring maximum productivity levels.
